

WARNING: May cause an allergic skin reaction or may cause damage to organs through prolonged or repeated exposure. Very toxic to the soil environment.
HAZARD CLASSIFICATIONS: 6.5B, 6.5B, 9.2A.
ACTIVE INGREDIENT: Contains 43g/kg picloram as the potassium salt in the form of a gel.

PRECAUTIONS: Keep out of reach of children. Read label completely before use. Store in original container away from foodstuffs. Avoid contact with skin and eyes. When applying, wear overalls, boots and waterproof gloves. Wash hands and exposed skin after use and before eating. Following contact with skin wash thoroughly, and with the eyes flush immediately. Wash contaminated clothing before re-use. Avoid contamination of water supply with chemical or empty container. In the event of spillage, prevent the gel from entering waterways. Absorb spill with soil. Do not eat, drink or smoke while using. **Keep children and pets off treated areas until gel has dried. Not for use on or near food or animal feed crops.**

FIRST AID: If swallowed DO NOT induce vomiting. Give plenty of water to dilute. For advice, contact The National Poisons Centre 0800 POISON (0800 764 766) or a doctor immediately. If skin or hair contact occurs, remove contaminated clothing and flush skin and hair with running water. If eye contact occurs, wash out immediately with water. If inhalation occurs, immediately move to fresh air and rest. Maintain upright position if breathing is difficult. Seek medical advice if feeling unwell.

STORAGE: Store in original container, tightly closed, securely away from children and foodstuffs.

DISPOSAL: Dispose of the container with domestic rubbish after triple rinsing.

GENERAL INFORMATION: McGregor's Woody & Bulbous Weed Killer is a herbicide gel effective against a range of problem weeds (including shrubs and trees). It is applied by swabbing the cut stump via the applicator bottle. Depending on the size of the unwanted plant, there is usually no resprouting after application and the plant will die over the following weeks. Complete death of particularly large trees or shrubs may take several months. Repeat treatments will be necessary if regrowth occurs. Although McGregor's Woody & Bulbous Weed Killer can be applied at any time of the year, better results will usually be achieved in spring - autumn. Avoid using when it is raining, or where rain is expected within 12 hours of treatment.

HSNO APPROVAL CODE: HSR000552

SAFETY DATA SHEET: Additional information is provided in the safety data sheet. Visit mcgregors.co.nz

- ✓ Controls hard to kill weeds with spot treatment
- ✓ Easy to apply
- ✓ Guaranteed results

KILLS

CLIMBING

BULBOUS

WOODY

WILD GINGER

CAUTION: Do not use on weeds immediately next to desirable plants, or in areas where their roots may extend. Do not use where gel may be washed into the root zone of desirable plants.

IMPORTANT: Read the label completely before use.

DIRECTIONS: Remove the cap, then gently squeeze the bottle until gel enters the applicator brush.

Trees, Woody Weeds and Shrubs: Barberrry, Broom, Buddleia, Cottonaster, Elder, Gorse, Hawthorn, Matagouri, Pine, Poplar, Privet, Sweet Briar, Tutu, Wattle, Willow & Woolly Nightshade. Cut the stem off near to the ground (2-10cm) and immediately apply gel 3-5mm thick onto the cut stump. Alternatively, for larger shrubs and trees with a trunk diameter greater than 15cm, 4 or more evenly spaced cuts, about 2cm deep, can be made with an axe or saw into the trunk near ground level. Apply the gel liberally into the cuts.

Climbing/Scrambling Perennial Weeds: Banana Passionfruit, Blue Morning Glory, Greater Bindweed, Honeysuckle, Ivy, Jasmine, Old Mans Beard & Vines. Cut the stem off near to the ground (2-10cm) and immediately apply gel 3-5mm thick onto the cut stump. To minimise risks to any desirable tree the weed may be climbing, care should be taken to avoid the gel contacting the desirable tree. Damage may also occur to desirable trees should the gel be washed into the root zone and alternative control methods should be considered.

Weeds with Creeping or Bulbous Roots: Agapanthus and Wild Ginger. Cut all shoots back to the root structure and immediately apply gel 3-5mm thick to the cut surface of the root structure. On plants such as Wild Ginger, where extensive root structures can occur between shoots, drill a hole approximately 10mm diameter into every forth structure from a shoot (to almost full depth) and fill with gel.
